Applications & Cleaning Tasks

The following uses are drawn from the supplied product description. Select cleaning agents and dispensing equipment appropriate to the workplace.

Food preparation benches and work areas

Food Preparation Areas: Suitable for routine wiping of food preparation surfaces, subject to workplace hygiene procedures and product suitability requirements. The blue wipe is readily visible in food-handling areas and can be used for wiping kitchen benches, preparation surfaces and back-of-house work areas.

Cut-to-length wiping and hand cleaning

Cutting a short section from the 70 m unperforated roll for hand wiping, or a longer length for bench cleaning and larger wipe-down tasks. Users can select the amount required rather than dispensing a fixed-size sheet.

Equipment and maintenance wipe-downs

Wiping suitable tools, equipment surfaces and maintenance work areas in workshops, facilities and production settings. The polyester scrim supports the tissue during wet wiping with water or appropriate cleaning solutions.

Light spills, splashbacks and work surfaces

Picking up light spills and wiping benches, splashback areas, counters and equipment after routine work. The absorbent reinforced tissue is intended for everyday clean-up rather than containment of large or hazardous spills.

Food-area hygiene and colour-coded cleaning

Using visible blue wipes as part of an established colour-coded cleaning system in food production and hospitality. The colour supports separation between designated tasks or zones when combined with workplace procedures.

Wall-mounted dispensing in busy work areas

Dispensing the roll from a compatible wall-mounted small-roll wipe dispenser to keep wipes accessible in kitchens, workshops and maintenance areas. Cut the length needed; dispenser compatibility should be checked before purchase.

Industries & Work Environments

• Facilities management • Food preparation • Food production	• Healthcare facilities • Hospitality • Maintenance	• Production areas • Workshops

Use and compatibility notes

Use dry or with water or a cleaning solution suitable for the surface and task. The reinforced tissue is intended for routine wiping and light spills. Check that a wall dispenser fits this roll. Follow workplace hygiene procedures when using wipes in food preparation areas. No cleanroom, sterile or medical-device claims are made.
